

Pop Mart (9992 HK)

Buy: Earnings reset ongoing, but limited multiple risk

- ◆ We expect 1Q26 revenue of RMB9.9bn (down low-single-digit q-o-q), marking the second consecutive quarter of decline
- ◆ Further consensus cuts are likely near term, though de-rating has largely been front-loaded
- ◆ Maintain Buy; lower TP by 28.5% to HKD235.50 (from HKD329.50) on earnings cuts and higher WACC

Earnings cuts likely to extend as Labubu-driven demand normalises: We expect Pop Mart to report 1Q26 revenue of RMB9.9bn (down low-single-digit q-o-q) in May, implying continued sequential weakness as the frenzy around Labubu fades, driving further earnings downgrades. Labubu ('The Monsters') contributed 38% of group revenue in 2025 (vs 40% in 2H25), underscoring its outsized role in the recent growth cycle. While broader IP expansion should partially offset this concentration, near-term growth is likely to fall below management targets and market expectations as the business rebases. We now forecast 2026 revenue growth of 14% y-o-y (vs 20% previously and below management's >20% target) and cut 2026 non-IFRS net profit growth to 10% (from 18%). Our current 2026e net profit is 9% below consensus on a 7% below consensus revenue forecast, reflecting ongoing earnings risk.

De-rating largely played out ahead of earnings cut: Compared with the previous earnings cycle, the valuation de-rating moved well ahead of fundamentals. In the last cycle (Mar-Nov 2022), the stock's one-year forward PE compressed from 20.5x to 11x at the trough, before recovering to 15.7x at the end of the earnings downcycle. In the current cycle, despite earnings cuts only beginning in Mar 2026, the stock has already de-rated to 11x forward PE, implying most multiple compression is priced in. From here, the share performance will hinge more on earnings stabilisation and re-acceleration, rather than a further de-rating.

IP platform value to emerge post-cycle: While Labubu drove outsized growth over the past two years, the key question is whether Pop Mart can transition to platform-led growth from explosive growth of single-IP. Near term, the rebase of Labubu will weigh on momentum, but medium-term growth should be supported by broader IP monetarisation, new categories, and global retail rollout. As a category-defining IP platform, Pop Mart retains the ability to generate new hit IPs, supporting growth beyond 2026 and a potential re-rating once earnings bottom out.

Maintain Buy; cut TP by 28.5% to HKD235.50 (from HKD329.50): Our lower target price is mainly driven by 7-9% cuts to our earnings estimates and using a higher WACC of 13.5% (before: 11.4%) to reflect near-term earnings uncertainty. Our long-term growth assumption of 3.0% remains unchanged. Our TP implies 2026e/27e P/E of 19.3x/15.4x and c51% upside to the current share price; we therefore retain our Buy rating.

Note: Priced at close of 27 Apr 2026

Earnings reset ongoing, but limited multiple risk

- ◆ We expect 1Q26 revenue of RMB9.9bn (down low-single-digit q-o-q), marking the second consecutive quarter of decline
- ◆ Further consensus cuts are likely near term, though de-rating has largely been front-loaded
- ◆ Maintain Buy; lower TP by 28.5% to HKD235.50 (from HKD329.50) on earnings cuts and higher WACC

Earnings revision cycle vs PE multiple

In the previous earnings downgrade cycle (Mar-Nov 2022), the one-year forward PE compressed from 20.5x to 11x over 7-8 months, bottoming near the end of the revision cycle.

Figure 1. Pop Mart earnings and valuation cycle 2020-2023

Source: Bloomberg

In the current cycle, the first consensus earnings cuts only began in March 2026, yet the stock is already trading at 11x one-year forward PE, indicating that the de-rating has largely played out ahead of the earnings downgrade cycle.

Figure 3 presents our estimates of quarterly revenue by region.

Figure 4 benchmarks reported online GMV against monthly GMV data from third-party provider, Moojing. In 2025, 66% of its full-year reported online sales were concentrated in 2H25, creating a high-base that is likely to weigh on its online growth in 2H26.

Figure 4. Pop Mart China online sales

Source: Moojing; Company data

Earnings revisions

Based on our quarter revenue forecasts, we now expect 2026 revenue to grow by 14.4% y-o-y (previously: 20.3%) and expect 2026 non-IFRS net profit to grow by 9.6% y-o-y (previously: 18.3%) to RMB14,344m, as slower revenue growth also leads to a lower retail margin.

Our CAGR over 2026-28e of 22.6%/24.2% for its revenue and net profit remain largely unchanged. After the 7.5% cut in 2026e earnings, our 2027/28e non-IFRS net profit is also lowered by 8.1%/8.8% on our 5.8%/6.7% lower revenue forecast.

In our DCF valuation, our other assumptions include: (1) operating (before ESOP) margin increasing from 43.9% in 2026e to 45.5% in 2030e (previously from 44.7% in 2026e to 46.5% in 2030e); (2) 20.7% (previously 21.6%) sales CAGR in 2026-30e; (3) capex intensity declining to 0.7% (previously 0.5%) of sales in 2030e from 2.9% (previously 1.1%) in 2026e; and (4) the tax rate remains at 23.6% in the forecast period (unchanged).

Valuation and risks

Valuation		Risks to our view
Pop Mart 9992 HK Buy	Current price: HKD156.10	Methodology: DCF methodology (FCFF) Assumptions: Our new WACC of 13.5% (from 11.4%) is based on a risk-free rate of 4.25%, an equity risk premium of 5.75%, a new company-specific beta of 1.60 (from 1.25), and a debt-to-equity ratio of 0:100. We use an unchanged long-term terminal growth rate of 3.0% and HSBC's latest end-2026e RMB:HKD forecast of 1.16. Our lower target price is mainly driven by 7-9% cuts to our earnings estimates with a higher WACC to reflect near-term earnings uncertainty. Our new target price of HKD235.50 (from HKD329.50) implies c51% upside; accordingly, we maintain our Buy rating.
	Target price: HKD235.50	
	Up/downside: +50.9%	
		Company-specific downside risks: ◆ The supply chain might not meet demand; excessive scalper markup may drive real consumers from market ◆ Shareholder placement might create short-term share price pressure ◆ Plagiarised products could dampen the company's reputation ◆ Inability to renew exclusive license agreements with cooperating artists for its major IP ◆ Misallocation of capital from entering new businesses or acquisitions with low returns. Industry-specific downside risks: ◆ Rising competition from more new market entrants ◆ Pandemic or other events that disrupt offline traffic.

Disclosure appendix

Analyst Certification

The following analyst(s), economist(s), or strategist(s) who is(are) primarily responsible for this report, including any analyst(s) whose name(s) appear(s) as author of an individual section or sections of the report and any analyst(s) named as the covering analyst(s) of a subsidiary company in a sum-of-the-parts valuation certifies(y) that the opinion(s) on the subject security(ies) or issuer(s), any views or forecasts expressed in the section(s) of which such individual(s) is(are) named as author(s), and any other views or forecasts expressed herein, including any views expressed on the back page of the research report, accurately reflect their personal view(s) and that no part of their compensation was, is or will be directly or indirectly related to the specific recommendation(s) or views contained in this research report: Lina Yan, CFA and Yimin Wang.

Important disclosures

Equities: Stock ratings and basis for financial analysis

HSBC and its affiliates, including the issuer of this report ("HSBC") believes an investor's decision to buy or sell a stock should depend on individual circumstances such as the investor's existing holdings, risk tolerance and other considerations and that investors utilise various disciplines and investment horizons when making investment decisions. Ratings should not be used or relied on in isolation as investment advice. Different securities firms use a variety of ratings terms as well as different rating systems to describe their recommendations and therefore investors should carefully read the definitions of the ratings used in each research report. Further, investors should carefully read the entire research report and not infer its contents from the rating because research reports contain more complete information concerning the analysts' views and the basis for the rating.

From 23rd March 2015 HSBC has assigned ratings on the following basis:

The target price is based on the analyst's assessment of the stock's actual current value, although we expect it to take six to 12 months for the market price to reflect this. When the target price is more than 20% above the current share price, the stock will be classified as a Buy; when it is between 5% and 20% above the current share price, the stock may be classified as a Buy or a Hold; when it is between 5% below and 5% above the current share price, the stock will be classified as a Hold; when it is between 5% and 20% below the current share price, the stock may be classified as a Hold or a Reduce; and when it is more than 20% below the current share price, the stock will be classified as a Reduce.

Our ratings are re-calibrated against these bands at the time of any 'material change' (initiation or resumption of coverage, change in target price or estimates).

Upside/Downside is the percentage difference between the target price and the share price.

Prior to this date, HSBC's rating structure was applied on the following basis:

For each stock we set a required rate of return calculated from the cost of equity for that stock's domestic or, as appropriate, regional market established by our strategy team. The target price for a stock represented the value the analyst expected the stock to reach over our performance horizon. The performance horizon was 12 months. For a stock to be classified as Overweight, the potential return, which equals the percentage difference between the current share price and the target price, including the forecast dividend yield when indicated, had to exceed the required return by at least 5 percentage points over the succeeding 12 months (or 10 percentage points for a stock classified as Volatile*). For a stock to be classified as Underweight, the stock was expected to underperform its required return by at least 5 percentage points over the succeeding 12 months (or 10 percentage points for a stock classified as Volatile*). Stocks between these bands were classified as Neutral.

*A stock was classified as volatile if its historical volatility had exceeded 40%, if the stock had been listed for less than 12 months (unless it was in an industry or sector where volatility is low) or if the analyst expected significant volatility. However, stocks which we did not consider volatile may in fact also have behaved in such a way. Historical volatility was defined as the past month's average of the daily 365-day moving average volatilities. In order to avoid misleadingly frequent changes in rating, however, volatility had to move 2.5 percentage points past the 40% benchmark in either direction for a stock's status to change.

Rating distribution for long-term investment opportunities

As of 31 March 2026, the distribution of all independent ratings published by HSBC is as follows:

Buy	59%	(12% of these provided with Investment Banking Services in the past 12 months)
Hold	36%	(12% of these provided with Investment Banking Services in the past 12 months)
Sell	6%	(6% of these provided with Investment Banking Services in the past 12 months)

For the purposes of the distribution above the following mapping structure is used during the transition from the previous to current rating models: under our previous model, Overweight = Buy, Neutral = Hold and Underweight = Sell; under our current model Buy = Buy, Hold = Hold and Reduce = Sell. For rating definitions under both models, please see “Stock ratings and basis for financial analysis” above.

For the distribution of non-independent ratings published by HSBC, please see the disclosure page available at <http://www.hsbcnet.com/gbm/financial-regulation/investment-recommendations-disclosures>.
