

China AI Chip Fabless

Supply a short-term bottleneck, and CSP client breakthrough a long-term growth driver

On an estimated ~40% unit CAGR for the China indigenous AI chip fabless sector over 2026-30, we believe tier-2 suppliers with: 1) secured foundry supply, and 2) potential cloud service provider (CSP) client breakthrough could outperform. We initiate coverage of Iluvatar CoreX with an OW rating ([link](#)), as we believe the company is less constrained by supply and could benefit from the prefill/decode (P/D) disaggregation trend. We also like MetaX ([link](#)), which adopts a fully localized supply chain and benefits from China government-sponsored AI applications. However, given its stretched valuation, we recommend waiting for a better entry point and we initiate coverage with a Neutral rating.

- **Indigenous AI chip demand set to soar.** Based on our token assumptions, with the added uncertainties of US AI chip supply, we expect China indigenous AI chip demand (units) to hit a c.40% 5-year CAGR by 2030. With superior single chip performance and local foundry capacity, we believe tier-1 suppliers could be imminent substitutes for US AI chips, while select tier-2 suppliers could offer higher sales growth, with an elaborate product strategy and inference/application focus.
- **Supply is a key bottleneck.** Global advanced foundry services have been significantly disrupted since 1H25 with US export controls/regulations. The impact on tier-2 AI chip fabless has been more severe with limited local foundry capacity for advanced node. Most tier-2 suppliers have had to leverage existing inventory to fulfill demand in the next 6-12 months; product and supply chain strategy are key factors for longer-term sales growth, in our view.
- **CSP client breakthrough a pivotal driver.** Tier-2 suppliers are more focused on government-sponsored AI projects currently, such as local government AIDC and smart city. As top CSPs have not yet deployed tier-2 AI chips substantially, design-wins for CSP clients could drive higher growth potential for select tier-2 players, in our view.
- **Iluvatar CoreX our top pick.** With efficient architecture design, we believe Iluvatar CoreX can not only secure chip supply, but also benefit from the P/D disaggregation trend and break into the supply chain of the top CSPs. MetaX is better positioned in government-sponsored projects, thanks to its sufficient inventory and fully localized supply chain. The sector is currently trading at 27x 2027E P/S on average, based on consensus estimates. We initiate coverage of Iluvatar CoreX at OW with a Jun-27 PT of HK\$620 (based on 20x forward P/S), and we initiate coverage of MetaX at Neutral with a Jun-27 PT of Rmb550 (based on 30x forward P/S).

Investment Thesis

Indigenous AI chip demand is set to ramp

Post the crowded IPOs of Chinese AI chip companies over the past 3-4 months, we believe we are now in the phase of commercialization or industrialization of domestic GPUs or AI ASICs, given the intensive expected investment in AI infrastructure.

We believe soaring token consumption in China is a substantial demand driver for indigenous AI chips. Our JPM Internet team is forecasting [\(link\)](#) China token consumption to show an approximately 330% CAGR over 2025-30, driven by: 1) penetration rises across both consumer users and enterprise workloads, and 2) use case expansion from conversational AI toward agentic and multimodal output (increasing tokens per session).

We believe the rapidly rising token consumption is largely driven by inference, and the incremental demand from training should be marginal (increasing parameters and multimodal as key catalysts). Based on our token demand forecasts, we derive our chip demand forecasts suggesting a ~40% CAGR for AI chip unit demand over 2026-30E.

Such AI chip unit demand is based on our throughput assumption per processor (i.e. tokens per second per TFLOPS to increase from 1.0 in 2025 to 3.3 in 2030), with a specific service level for inference (e.g. 20 tokens/second output with a batch size of 128 and KV Cache Length of 4,096). Meanwhile, the other key underlying assumptions include: 1) single compute die per AI chip, 2) steady compute die performance improvement in coming years, and 3) an increasing utilization rate of China AIDC capacity.

Figure 1: China inference token demand (annual)

Source: National Data Administration (24 Mar 2026), J.P. Morgan estimates.

Figure 2: Incremental AI chip demand (annual basis)

Source: J.P. Morgan estimates.

Two types of indigenous AI chip fabless

We categorize China indigenous AI chip fabless companies into two groups:

Tier-1 suppliers: The revenue size is approaching ~Rmb10bn in 2026E, with existing sales exposed to China's top CSPs (i.e. Alibaba, Tencent and Bytedance). We believe there are 4 players in tier-1: Huawei, Cambricon, Kunlunxin, and T-Head.

Tier-1 suppliers hold some advantages: 1) higher single chip performance (Huawei, Cambricon); 2) capacity support from local/global foundries (Huawei, Cambricon, Kunlunxin); and 3) relationships with top CSPs (Kunlunxin, T-head). With the uncertainties of US AI chip supply, tier-1 suppliers are set to substitute US chips imminently, in our view.

Tier-2 suppliers: The revenue base is relatively low for tier-2 suppliers, and they have limited exposure to China top CSPs. Companies in this group include: Biren, MetaX, Iluvatar CoreX, Moore Threads and Enflame.

Figure 3: Comparison of performance and interconnection

Source: Company websites (03 Apr 2026), IPO prospectus (03 Apr 2026), J.P. Morgan.

Figure 4: Revenue size of key AI chip vendors in China

Note: 2025(E) for Cambricon, Moore Threads, MetaX, Biren and Iluvatar CoreX, and 2024 for Enflame
Source: 2025 annual reports (Cambricon, MetaX), Public filings (Moore Threads, Biren, Iluvatar CoreX, 03 Apr 2026), IPO prospectus (Enflame, 03 Apr 2026).

Chips of tier-2 suppliers are currently more exposed to government-sponsored and application-specific projects, such as local government AIDCs, and traffic control or healthcare applications, finance and research institutions. These chips are largely adopted for inference loadings, in our view.

We believe tier-2 suppliers are facing greater challenges after international foundries suspended services for advanced node in 1H25, owing to limited availability of advanced node capacity from local foundries. We believe most tier-2 suppliers are likely to rely on existing inventory to fulfill customer demand in the next 6-12 months.

In the longer term, we believe product and supply chain strategy will be pivotal: selected tier-2 suppliers could break into the supply chain of the top CSPs and deliver much higher sales growth.

Supply is the key bottleneck, in the short to mid term

Given Chinese AI chip companies only have limited access to advanced capacity overseas, especially under certain transistor density or technology nodes, they have no choice but to transfer chip production to local leading-edge foundries such as SMIC (0981 HK) or at least to prepare indigenous supply chain locally. However, the existing advanced capacity for GPU/ AI ASICs has been largely occupied by Huawei Ascend and Cambricon, based on our supply chain checks.

Due to the difficulty of building leading-edge capacity and inferior production yields, we believe the availability of wafer fabrication would be the key bottleneck at the current stage. Also, a lack of critical equipment such as Extreme Ultraviolet (EUV) lithography system, inspection and metrology caused the longer learning curve and then slower capacity ramp-up; our supply chain checks suggest tier-2 players were only able to initiate the tape-in process at leading-edge tech node by late 2025, hence significant shipments of local-produced chips should be expected from 2H26 onwards.

Considering both exponential (inference) demand and likely restrained overseas supply, we expect domestic AI computing chips to remain a seller's market for the next 6 to 18 months, under a progressive release of fab capacity locally (assumed). With that said, we believe chip players with a high inventory buffer could be preferred by customers in the near term. Meanwhile, we have observed that many companies have prepared high inventory (comparable to revenue) to ensure smooth and timely delivery to customers.

Figure 5: Inventory vs revenue of key AI chip companies

Note: 3Q25/9M25 for Moore Threads and Enflame; 2025 for Cambricon, MetaX, Biren and Iluvatar CoreX

Source: 2025 annual reports (Cambricon, MetaX), Public filings (Moore Threads, Biren, Iluvatar CoreX, 03 Apr 2026), IPO prospectus (Enflame, 03 Apr 2026).

Availability of foundry (or domestic) capacity is the foundation for the mid term (12-24 months) or long term

Many of the US restrictions on China or Chinese entities to access advanced semiconductor products date back to 2022, and the main constraints include: 1) leading-edge wafer fabrication, 2) key equipment or materials for advanced tech nodes, and 3) the procurement of advanced computing chips (also HBMs). In particular, restrictions include: chip performance ceiling limits on total processing

performance (TPP) below 21,000 (memory bandwidth under 6,500 GB/s) and performance density (PD) below 5.92.

Table 2: Parameter comparison between H20 and H100

	NVIDIA H20	NVIDIA H100
Total Processing Power	2,368	31,664
Die Area (mm ²)	814	814
Performance Density	2.9	38.9

Source: NVIDIA (Company website, 03 Apr 2026), Bureau of Industry and Security (BIS, 03 Apr 2026), J.P. Morgan.
Note: TPP = Total TFLOPS x Bit Length of Operation, PD = TPP/ Applicable Die Area (mm²)

Given these restrictions, some chips or wafers fabricated at overseas capacity with lower density of transistors or smaller die size are practical, in our view. Meanwhile, we believe an extremely large die size (ie 800mm²) is not necessary for Chinese chip designers, owing to inefficiency caused by TPP/PD restrictions, and notification or further examination is probably involved. To be compliant with the PD threshold, our calculations indicate that the compute chip designed by a Chinese company could only have about 100TFLOPS (FP16) below 300mm² die size or 200TFLOPS below 500mm². In conclusion, Chinese companies are not able to access essentially powerful or efficient hardware produced by overseas partners (or fabricated at most advanced tech nodes).

Although the release of advanced capacity by domestic foundries is likely at a very moderate pace, we believe the majority of domestic AI chip vendors will count on domestic foundries' leading-edge capacity, and a certain level of capacity reservation is likely to guarantee predictable revenue generation (other than inventory depletion) in the longer run as well as smooth technology migration in the future.

Cambricon (688256 CH, not covered) is an example of a local player building up its indigenous supply chain, which delivered significant revenue growth in past the several quarters. Wind consensus is forecasting ~100% revenue growth into 2026, post a fivefold expansion in 2025. In spite of robust market demand, we believe the strong momentum is likely attributable mainly to inventory piled up previously and the ramp-up of capacity allocation by domestic foundry partners.

Figure 6: Cambricon's quarterly revenue trend and inventory

Source: Cambricon (Quarterly financial reports, 1Q22-4Q25).

Indigenous AI chip suppliers to ship 5mn unit by 2028E

Combining both overseas and domestic capacity, we expect China indigenous AI chip suppliers to ship 2mn/3mn/5mn AI chips including GPU and ASIC, in 2026/27/28E, respectively. Our key assumptions include: 1) a logic die size of 700mm² equivalent, 2) all shipments based on 7nm or N+2 foundry node, and 3) single die in a package. Therefore, actual unit shipments from indigenous AI chip suppliers could deviate during the period, with smaller chip size, multi-die package and the adoption of less advanced node (i.e. 12nm/N+1 process). As a result, we believe such chip shipments or supply could support Rmb230bn/326bn/532bn AI server sales in China, considering stabilized memory prices and an increasing mix of supernode solutions during 2026-28E.

Figure 7: Shipment forecast of AI chips supplied by domestic companies

Breakthrough at CSP clients a pivotal growth driver

Mapping of key partners in the indigenous supply chain in China

Unlike tier-1 suppliers, most tier-2 suppliers are focused mainly on government-sponsored projects and applications. We expect supply-chain localization, i.e. designed, produced and packaged in China, to be one of the pivotal factors for design-wins for government-sponsored projects and applications,

We believe all Chinese AI chip designers are collaborating with local partners, even though some of them are able to leverage overseas supply with compliant chip performance (eg. Kunlunxin, Iluvatar CoreX). We also provide an interactive dashboard ([link](#)) to assist with the screening of the indigenous supply chain in China.

Figure 9: Key players of China's AI chip supply chain

Source: J.P. Morgan.

Chinese CSPs as the main force of AI proliferation

Thanks to the upcoming proliferation of AI applications, we believe China CSPs, telecom operators, as well as LLM enterprises are all striving to secure computing power (largely for inference demand).

The top CSPs in China, especially ByteDance, Alibaba and Tencent, used to allocate more capacity, say 40-60%, to US AI chip suppliers; however, with the rising uncertainty of chip availability, we believe indigenous AI chip suppliers are likely to achieve a higher allocation.

Taking ByteDance as an example: we estimate AI chip demand from ByteDance in China, which is potentially the largest AI chip buyer, could reach over 0.5mn units this year (700mm² equivalent, if no availability of US AI chips), thanks to its distinctive position as a massive consumer of AI (via Douyin) and a growing provider of AI (via Volcano Engine/Doubao, etc.). Furthermore, from a budget perspective, we expect other non-government-related buyers, including Alibaba, Tencent and other CSP/internet companies, to consume about 2x ByteDance's volume in total.

As a result, we expect Chinese CSPs to consume over half of domestic AI chips in the near future and likely increase procurement (%) over an extended timeframe, thanks to the incentives of efficiently launching their AI enabled IaaS, PaaS, SaaS, as well as MaaS.

Figure 10: Demand mix by customer category (2026E)

Source: J.P. Morgan estimates.

In this case, the potential design-win of CSP projects could be a source of significant upside for tier-2 players; however, we believe only selective suppliers who can: 1) secure volume shipments and 2) offer products to optimize system efficiency and better TCO (total cost of ownership) would prevail among peers.

We believe tier-2 AI chip suppliers could target inference loadings of CSP clients, and we believe the recent trend of prefill-decode disaggregation for inference loading could be a good opportunity.

Initiate coverage of China AI chip fabless sector

Stock performance largely driven by sales momentum and market-share gains

As a reference point, the market leader, Cambricon's stock price has surged over 5 times since its IPO listing (20 Jul 2020), and significantly outperformed the CSI300 by 350%+, thanks to its rapidly growing revenue and market-share gains amid disrupted supply/demand dynamics. Even though the upside or growth potential of tier-2 players is quite divergent, we believe this historical performance of Cambricon could serve as a good reference.

Figure 11: Share performance comparison of players in the China AI chip fabless sector

Source: Wind (03 Apr 2026), J.P. Morgan.

Due to the sector's limited history and loss-making status, the market has widely adopted P/S multiples to examine the valuation of domestic AI chip companies, and tends to benchmark Cambicon as the anchor, which has delivered notable sales growth and economies of scale in the past two years. Cambicon is trading at a 27x forward P/S multiple vs its average valuation of 51x since listing, based on Wind consensus estimates.

We believe the current end-market dynamics are more favourable for domestic AI chip names, given: 1) the highly constrained availability of overseas chips, 2) the shorter learning curve supported by stronger intention for adoption by customers, and 3) fewer uncertainties of supply disruption with the indigenous supply chain largely settled.

Iluvatar CoreX is our top pick

Both Iluvatar CoreX and MetaX are our selected names among tier-2 Chinese AI chip fabless names; Iluvatar CoreX is our top pick, thanks to: 1) less supply disruption with both international and domestic foundry partners, 2) a potential beneficiary of prefill-decode (P/D) disaggregation supported by customer-optimized products and 3) discounted valuation at higher growth potential from CSP design-wins.

Iluvatar CoreX has outperformed its key domestic peers since its IPO (8 Jan 2026), even though its market capitalization is still small at HK\$60bn. We initiate coverage of Iluvatar CoreX with an OW rating and Jun-27 PT of HK\$620.0 (based on 20x forward P/S); our target multiple is 30% lower than the average of domestic peers mainly to reflect the market risk premium between A and H shares, but with more attractive growth potential.

We are constructive on MetaX's fundamentals, owing to its high inventory levels and prudent product strategy to secure sustainable growth momentum. Given its valuation is slightly stretched at a 40x 2027E P/S multiple, we suggest waiting for a better entry point. We initiate coverage with a Neutral rating and Jun-27 PT of Rmb550.0 (based on 30x forward P/S), which is around the average of its domestic peers, based on Wind consensus estimates. We believe a key positive catalyst is faster or more meaningful progress at CSP customers.

Key investment thesis of Iluvatar CoreX

Iluvatar CoreX's product portfolio is designated to leverage foundry services from both local and international providers, hence we believe the company is likely to achieve more design-wins from top Chinese CSPs with sufficient supply. Moreover, Iluvatar CoreX's customer-optimized products are more suitable for prefill-decode (P/D) disaggregation infrastructure, which can greatly improve inference efficiency. We model a 102% 2026-28 sales CAGR and expect Iluvatar CoreX to make a profit in 2027.

Downside risks to our rating and price target include: Tightened US control on foundry service and inferior yields at domestic foundry cause supply disruption. Lower-than-expected capex by CSPs given weak end demand or availability of overseas chips. Higher R&D ratio for design and tape-out of new chips to impact profitability.

Key investment thesis for MetaX

We believe MetaX adopts a prudent product and supply-chain strategy: short-term demand is fulfilled by sufficient inventory, while dual-die C600 chip at N+1 process will be available to meet mid-term demand from 2H26. For the longer term, MetaX targets to upgrade process to N+2 for better performance and power consumption. In our view, such a strategy will help MetaX to secure sales growth; meanwhile, its fully localized supply chain should enable MetaX to win various government-sponsored projects. We model a >70% 3-year sales CAGR during 2026-28E and expect the company to achieve breakeven by end-2026.

Upside and downside risks to our rating and price target include: Inferior production yield of domestic foundry to impact chip performance or delivery. Less-than-expected capex made by CSPs given weak end demand or availability of overseas chips. Higher R&D ratio for design and tape-out of new chips to impact profitability.

J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, <https://www.jpmorganmarkets.com>.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Any digital or crypto assets discussed in this research report are subject to a rapidly changing regulatory landscape. For relevant regulatory advisories on crypto assets, including bitcoin and ether, please see <https://www.jpmorgan.com/disclosures/cryptoasset-disclosure>.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC (“JPMS”) acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit <https://www.theocc.com/components/docs/riskstoc.pdf> for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries (“J.P. Morgan Private Bank”), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have

investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.
